Summary

Information Science student who builds AI projects, from cleaning data and training ML models to building RAG and LLM apps with simple dashboards.

Education

BTech in Information Science and Engineering — CGPA - 8.81
NMAM Institute of Technology, Nitte, Udupi — *2023 – 2027*

PUC — Percent - 93
Vidyodaya PU College, Udupi — *2023*

10th — Percent - 86
SMS English Medium School, Brahmavar, Udupi — *2020*

Experience

Software Developer - Intern — April - July 2026
Comcent.io — *Remote*

- Developed a cross-platform, open-source SIP calling app in Flutter: full call-handling flow (hangup, mute, speaker) and the settings, dialpad, in-call and call-history screens.
- Tested against a live SIP server to validate successful call flows and failure edge cases.

Projects

Educational Exploration Game | *Python, FastAPI, RAG, FAISS, LLM, Q-Learning* — 2026

- Built a RAG system that searches the web for a topic, splits the text into chunks, and stores their embeddings in a FAISS vector database.
- Used the most relevant chunks to help an LLM create quiz questions with options and hints.
- Used Q-learning to change the question difficulty based on how well the player is doing.

Scalable Food Ordering and Delivery | *Go, PostgreSQL, Redis, RabbitMQ, Razorpay, Docker* — 2026

- Developed a microservices based food ordering platform covering users, restaurants, and orders.
- Used Docker to containerize the services.
- Built the React based frontend for the restaurant, ordering, and delivery partner interfaces.

Customer Support Intelligence Platform | *Python, NLP, RAG, LangGraph, FastAPI, Streamlit* — 2026

- Cleaned over 60,000 support tickets by fixing broken text, removing duplicates and hiding personal details.
- Built ML models that send each ticket to the right team, predict its priority and flag urgent tickets.
- Built an AI agent with LangGraph that finds similar past tickets (RAG) and drafts a reply, shown in a dashboard.

Skills

Languages: Python, SQL, JavaScript
AI / ML: Machine Learning, NLP, scikit-learn, pandas
GenAI: RAG, LLM APIs, Embeddings, Vector Database (FAISS), LangGraph
Tools: FastAPI, Streamlit, Node.js, MongoDB, Git, Docker
Soft Skills: Communication, Teamwork, Leadership, Problem Solving

Extra-Curricular Activities

- Member of the branch club; participated in coding contests, workshops and technical events.
- Volunteered for a coding contest at Incridea 2025, supporting event execution and participant experience.
